1.0 INTRODUCTION

1.1 OVERVIEW

A healthcare delivery organization or clinician may need to communicate a clinical document to a recipient through direct communication. This may involve direct interchange between Electronic Health Records (EHRs), Personal Health Records (PHRs), Quality Measurement Organizations, Public Health Authorities and other healthcare IT systems in the absence of a document sharing infrastructure such as that enabled by the Integrating the Healthcare Enterprise (IHE) IT Infrastructure Technical Framework. The content of the communication might be clinical documents, quality documents or public health documents. This construct provides a standards-based mechanism for conveying a set of medical documents in a point-to-point network-based communication.

This Transaction uses the IHE Cross-Enterprise Document Reliable Interchange (XDR) Integration Profile, a companion to the IHE Cross-Enterprise Document Sharing (XDS) Integration Profile. Cross-Enterprise Document Reliable Interchange (XDR) uses the XDS defined metadata formats in a simpler environment in which the communicating parties have agreed to a point-to-point interchange rather than communicating via document sharing.

This specification includes, by reference, the Transactions and Components that comprise the Provide and Register Transaction. It describes the processes supported by these structures and the work that is accomplished by implementing this Transaction. Source material is from the IHE IT Infrastructure Technical Framework (ITI-TF) 2009-2010, Cross-enterprise Document Reliable Interchange (XDR) Trial Implementation Supplement Version - Release 4.0.

1.3 REFERENCE DOCUMENTS

This section provides a list of key reference documents and background material.

A list of key reference documents and background material is provided in the table below. These documents can be retrieved from www.hitsp.org.

<table>
<thead>

</tr>
</tbody>
</table>
1.4 CONFORMANCE

This section describes the conformance criteria, which are objective statements of requirements that can be used to determine if a specific behavior, function, interface or code set has been implemented correctly.

1.4.1 CONFORMANCE CRITERIA

In order to claim conformance to this construct specification, an implementation must satisfy all the requirements and mandatory statements listed in this specification, the associated HITSP Interoperability Specification, its associated construct specifications, as well as conformance criteria from the selected base and composite standards. A conformant system must also implement all of the required interfaces within the scope, subset or implementation option that is selected from the associated Interoperability Specification.

Claims of conformance may only be made for the overall HITSP Interoperability Specification or Capability with which this construct is associated.

1.4.2 CONFORMANCE SCOPING, SUBSETTING AND OPTIONS

A HITSP Interoperability Specification must be implemented in its entirety for an implementation to claim conformance to the specification. HITSP may define the permissibility for interface scoping, subsetting or implementation options by which the specification may be implemented in a limited manner. Such scoping, subsetting and options may extend to associated constructs, such as this construct. This construct must implement all requirements within the selected scope, subset or options as defined in the associated Interoperability Specification to claim conformance.
2.0 TRANSACTION DEFINITION

2.1 CONTEXT OVERVIEW

This Transaction describes a standards based mechanism to enable the interchange of documents using a reliable messaging system. This allows for a point-to-point communication option for the interchange of documents in the absence of an XDS document sharing infrastructure or for communications of documents to one or more specific receivers.

Building on existing standards to define this Transaction, HITSP has chosen the IHE Cross-Enterprise Document Reliable Interchange (XDR) Integration Profile published by Integrating the Healthcare Enterprise (IHE). Source material is from the XDR Supplement Version 4.0 to the IHE IT Infrastructure (ITI) Technical Framework (TF), Volume 1 and Volume 2 (ITI TF-1 and ITI TF-2) Version 6.0 or later.

The IHE XDR Integration Profile, which is reproduced in part in this specification with written permission from IHE, explains how interfaces should comply with the proposed standards for interoperability. Key concepts from the IHE XDR Integration Profile are introduced in this document to help the reader understand the context of the Profile. The entire IHE XDR Integration Profile is also available at www.ihe.net/Technical_Framework.

Overview of XDR

This section provides an overview of the IHE XDR Integration Profile. Its intent is to provide the reader with an introductory context to the XDR Profile. XDR defines the reliable interchange of IHE Cross-Enterprise Document Sharing (XDS) Integration Profile documents submission sets as a direct communication using Web Services. This permits direct document interchange between EHRs and other healthcare IT systems such as Quality Measurement Organizations and Public Health Authorities in the absence of a document sharing infrastructure such as XDS.

The text for the IHE XDR Integration Profile begins here:

XDR describes the exchange of a set of a patient’s documents between healthcare providers, such as: physicians, hospitals, special care networks or other healthcare professionals.

Where XDS Registry/Repositories are not yet implemented or available for the exchange of information, XDR is the viable approach.

In a situation where the information is going to an automated application or robust system capable of automated storage or processing of documents relative to one patient, XDR is the appropriate profile.

The XDR Integration Profile is intended only for exchange of patient related medical documents and not intended to address all cross-enterprise EHR communication needs.

This profile is only defining the digital transport mechanism used for such Use Cases. Content transported will be detailed by Content Profiles such as the ones defined by the IHE PCC (Patient Care Coordination) domain.

The text for the IHE XDR Integration Profile ends here.

2.1.1 INTERFACES

There are two interfaces involved in this Transaction supporting a Web Services based HTTP message sending either a single document or multiple documents. Communication is initiated by the Document Sender and are received and processed by the Document Recipient.
Table 2-1 Interfaces

<table>
<thead>
<tr>
<th>Interface</th>
<th>Description</th>
<th>Used in Component/Standard</th>
<th>Transaction/Content</th>
<th>Optionality</th>
</tr>
</thead>
<tbody>
<tr>
<td>Document Recipient</td>
<td>Receives a set of documents sent by another interface. Typically this document set will be made available to the intended recipient who will choose to either view it or integrate it into a Health Record</td>
<td>IHE Document Reliable Interchange (XDR)</td>
<td>Provide &amp; Register Document Set.b</td>
<td>R</td>
</tr>
<tr>
<td>Document Source</td>
<td>Producer and publisher of documents. It is responsible for sending documents to a Document Repository Interface. It also supplies metadata to the Document Repository Interface for subsequent registration of the documents with the Document Registry Interface</td>
<td>IHE Document Reliable Interchange (XDR)</td>
<td>Provide &amp; Register Document Set.b</td>
<td>R</td>
</tr>
</tbody>
</table>

Optionality Legend: “R” for Required, “O” for Optional, or “C” for Conditional

2.1.2 INTERFACE INTERACTIONS

Figure 2-1 Document Reliable Interchange Interface Interactions

The Document Source sends the document or set of documents to a single recipient, using an HTTP Web Service based on-line transmission mode for receipt and processing by the Document. This leverages the IHE ITI-41 Provide and Register Document Set-b Transaction.

2.1.3 CONDITIONS AND ASSUMPTIONS

Table 2-2 Context

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

2.1.4 DATA FLOWS

HITSP is adhering to the IHE XDR Trial Implementation specifications without further constraint.
Technical specifications for the transmission including message header and metadata constraints may be found in the IHE XDR 2009-2010 Trial Implementation Supplement Version 4.0.

3.0 APPENDIX

The following sections include relevant materials referenced throughout this document.

No additional information at this time.
4.0 DOCUMENT UPDATES

The following sections provide the history of changes made to this document.

4.1 DECEMBER 7, 2007

No changes. This is the first published version of the document.

4.2 MARCH 19, 2008

There were no comments against this document. Minor editorial changes were made to make this document comply with the current templates.

4.3 MARCH 27, 2008

Upon approval by the HITSP Panel on March 27, 2008, this document is now Released for Implementation.

4.4 AUGUST 20, 2008

This document has been modified to reflect the updated HITSP approach to categorizing standards as Regulatory Guidance, Selected Standards, and Informative References.

The following standards were designated as Informative References:

- Integrating the Healthcare Enterprise (IHE) IT Infrastructure Technical Framework (ITI-TF) Revision 4.0
- Internet Engineering Task Force (IETF), HTTP HyperText Transfer Protocol HTTP/1.1 (RFC 2616)
- Internet Engineering Task Force (IETF), MIME Multipurpose Internet Message Extensions (RFC 2045 to RFC 2049)
- Internet Engineering Task Force (IETF), SMTP Simple Mail Transfer Protocol (RFC 2821)
- Internet Engineering Task Force (IETF), The MIME Multipart/Related Content-type (RFC 2387)
- Organization for the Advancement of Structured Information Standards (OASIS) - ebRIM OASIS – ebXML Registry Information Model V2.1
- Organization for the Advancement of Structured Information Standards (OASIS) - ebMS OASIS/ebXML Messaging Services Specifications V2.1
- Organization for the Advancement of Structured Information Standards (OASIS) -ebRS OASIS – ebXML Registry Services Specifications V2.1

4.5 AUGUST 27, 2008

Upon approval by the HITSP Panel on August 27, 2008, this document is now Released for Implementation.

4.6 DECEMBER 10, 2008

- Updated the document to remove the mail option. This option is no longer specified by the underlying IHE XDR standard
- Updated Table 2-1 Interfaces to remove mail option, and updated Unified Modeling Language (UML) diagram to show only the ITI-41 Provide and Register Document Set-b Transaction

Minor editorial changes were made to this construct.
4.7  DECEMBER 18, 2008
Upon approval by the HITSP Panel on December 18, 2008, this document is now Released for Implementation.

4.8  JUNE 30, 2009
Minor editorial changes were made to this document. Removed boilerplate text for simplification. The term “actor” was replaced with “interface”.

4.9  JULY 8, 2009
Upon approval by the HITSP Panel on July 8, 2009, this document is now Released for Implementation.

4.10  JANUARY 18, 2010
Editorial changes, including deleting the informative standards section 2.3.3. Updated references to IHE-ITI rev 6.0 or later, and updated reference to IHE-ITI Trial Supplement Cross-enterprise Document Reliable Interchange (XDR) Version 4.0.
Informative reference standards were removed from section 2.3.3 as they did not reflect the underlying standards as specified in the selected IHE profile.
The descriptive text in the Selected Standard Table 2-11 was updated.
The document has been updated to reflect HITSP Transaction template version 2.7.

4.11  JANUARY 25, 2010
Upon approval by the HITSP Panel on January 25, 2010, this document is now Released for Implementation.
